

NEWS RELEASE 10-05

May 14, 2010

“EM” SURVEY COMPLETED AT THE PARASO PROJECT

XDM Resources Inc. (“XDM” or the “Company”) is pleased to announce that it has successfully completed an Electro-Magnetic (“EM”) airborne geophysical survey of the main Paraso alteration system using a helicopter-towed REPTeM system.

Following an international tender, GeoSolutions Pty Ltd, a South Australia based geophysical group, were selected to complete an initial survey of approximately 2,600 line kilometres covering portions of the XDM projects in the Solomon Islands (including the Kele, Mase, and Paraso tenements) by June 31, 2010.

On the Paraso Project, the Company flew a total of 80 line kilometres along north east orientated lines, spaced 200m apart. Steep topography restricted the coverage to the central alteration/hydrothermal system with survey coverage of 16km². Initial data images highlight a very strong conductor coincident with the active thermal hot springs in the central part of the survey area. Interpretation of the data is to be completed by Mike Sexton of Planetary Geophysics by August.

ABOUT XDM

XDM is a private Canadian company with a 100% interest in four large copper-gold and gold exploration properties in the Western Province of the Solomon Islands.

Cautionary Statement Regarding Forward-Looking Information

All statements, trend analysis and other information contained in this press release relative to markets for XDM's trends in resources, recoveries, production and anticipated expense levels, as well as other statements about anticipated future events or results constitute forward-looking statements. Forward-looking statements are often, but not always, identified by the use of words such as “seek”, “anticipate”, “believe”, “plan”, “estimate”, “expect” and “intend” and statements that an event or result “may”, “will”, “should”, “could” or “might” occur or be achieved and other similar expressions. Forward-looking statements are subject to business and economic risks and uncertainties and other factors that could cause actual results of operations to differ materially from those contained in the forward-looking statements. Forward-looking statements are based on estimates and opinions of management at the date the statements are made. Some of these risks, uncertainties and other factors are described under the heading “Risk Factors” in the Company's annual information. XDM does not undertake any obligation to update forward-looking statements even if circumstances or management's estimates or opinions should change other than as required by applicable law. Investors should not place undue reliance on forward-looking statements.

All scientific and technical information contained in this news release has been prepared under the supervision of Anthony Schreck, the Company's Chief Geoscientist and Qualified Person. Anthony Schreck has verified the technical data disclosed

for accuracy and correctness. Potential quantity and grade is conceptual in nature. There has been insufficient exploration to define a mineral resource on any of the Company's properties and it is uncertain if further exploration will result in any such target being delineated as a mineral resource. QA/QC procedures were applied during the execution of the work being reported upon.
